

Thinking With Somebody Else's Head

What is a Podcast?

Think of a podcast as a radio (or TV if it's a video podcast) show. Each show consists of a series of individual episodes that you can listen to how you want — on your PC, using your MP3 player, or with just a web browser.

If you've never listened to podcasts, you're in for a treat. Sports, comedy, movies, food, politics, music, books, speeches, walking tours, whatever — you name the topic and you'll find podcasts about it. Not only do you have incredible choice, you can listen whenever and wherever you want.

You can listen to these episodes one at a time (through your web browser) or you can 'subscribe' to the entire podcast series using software (like Yahoo! Music Engine or Apple iTunes) on your PC or Mac. When you subscribe to a podcast, all new shows will be automatically downloaded to your computer as they are published. If you have an MP3 player, the next time you sync your device, your podcasts will be downloaded for listening on the go.

How to listen to Podcasts

Once you've found something that looks interesting, listen to it! Here's how.

Listen on the Web

If you've found a Podcast page on the Web, you can listen right away by simply clicking the "Listen" button. If you like what you hear, you can subscribe...

Subscribe

Don't panic! — It's almost always free.

When you subscribe to a podcast you'll get the newest episodes delivered to your computer as soon as they're available. You'll need to download some music software to do this, like **Yahoo! Music Engine** or **Apple iTunes**. Through this software, new episodes will automatically download to your computer whenever they're available.

Download

If you only want a copy of a particular episode, you don't have to subscribe. You can just click the "Download" button to save to your hard disk. Then, listen to it like you would any other audio file. (But trust us, you'll like subscribing.)

On the Go

If you want to listen to a podcast on your MP3 player, it's easy. Just download the episode to your computer, or subscribe to the series, and use your music software (**Yahoo! Music Engine** or **Apple iTunes**) to transfer it to your MP3 player.
